

## EDUCATION:

|                                                |                          |           |
|------------------------------------------------|--------------------------|-----------|
| B. Tech IT - Sri Eshwar College of Engineering | 7.7 CGPA (Up to 5th Sem) | 2024-2027 |
| DIPLOMA EEE- Pandiyan polytechnic college      | 89%                      | 2019-2022 |
| SSLC – Sri Saraswathi Matriculation School     | 67%                      | 2018-2019 |

## INTERNSHIP:

### Web Development Intern [Better Tomorrow \[2025\]](#)

Created a movie recommendation site using [list technologies employed, e.g., React, Node.js, etc.]. Brought in features such as [list major features, e.g., personalized recommendations, user reviews, API integration]. Gained skills in frontend & backend development, database management, and UI/UX design.

### DevOps Intern [RAMPeX Technologies \[2025\]](#)

I am running a Spring Boot application on AWS EC2. I have set up CI/CD pipelines with Jenkins to automate the build and deployment processes. Additionally, code quality is being maintained through the integration of SonarQube. The application was containerized using Docker, and Docker images were pushed to Docker Hub. This project enhanced my knowledge of the following: how to set up EC2, configure Nginx, automate deployments, and effectively use DevOps.

### Cloud Intern [CORIZO\[2025\]](#)

I have completed my practical training with a great success in the field of cloud computing at Corizo. During the tenure, I gained hands-on experience of various AWS services such as EC2, S3, IAM, VPC, and DynamoDB. Furthermore, I had the privilege to develop a Hotel Booking Chatbot Application which went with Amazon Lex and AWS Lambda handling backend processing

## PROJECTS:

### AI MISSING FINDER | [Link](#)

I designed a full-stack web application which consist of user and admin login system. where the user can register a case and admin can review the complaint and assign a station who is approving the images are stored in Cloudinary, and machine learning is used to identify an unknown person whose data is present in the database and can be viewed by the police who are scanning

### CAMPUSLINK | [Link](#)

I developed a web platform that makes campus services available through digital means by which students can obtain their timetables, report lost items, register complaints in hostels, and get updated with campus news. Using this system, students and admins are provided with secure access which facilitates communication, issue tracking, and the entire campus management process to be efficient.

### QUIZBATTLE | [Link](#)

Created a Quiz Application that works in real-time. The users can log in, make quizzes, and share them by using a link or ID. Participants can take the quiz and see their results immediately after submission. Utilized Socket.IO for real-time interaction between users. Kept all quiz data and results in a safe way in MongoDB. This project strengthened my full-stack development skills

## CERTIFICATIONS:

|                                                                           |      |
|---------------------------------------------------------------------------|------|
| Build a Backend REST API with Node JS from Scratch  <a href="#">Udemy</a> | 2025 |
| Learn JAVA Programming -Beginner to Master   <a href="#">Udemy</a>        | 2024 |
| SQL intermediate   <a href="#">HackerRank</a>                             | 2024 |
| Auto cade Electrical   <a href="#">Cad Desk</a>                           | 2020 |

## PROGRAMING ACHIVEMENTS :

LeetCode : Solved 120+ | [profile](#)  
Codechef : [profile](#)  
Hackerrank : [profile](#)

## SKILLS:

Languages: Java, Javascript  
Technologies/Frameworks: HTML5, CSS3  
Tools: VScode, Git, Github, Docker ,Teraform  
Cloud/Databases: Mysql, MongoDB, Cloudinary  
Core Concepts: Data Structures & Algorithms, Object Oriented Programming.
